# How to Fix a Leaking Sink Drain

There are several reasons why a sink drain might be leaking. The most common cause is a loose connection between the pipe and the sink. To fix this, you will need to turn off the water supply to the sink. Then, you will need to remove the sink and inspect the connection. If the connection is loose, you can tighten it with a wrench. If the connection is broken, you will need to replace the pipe. Another common cause of a leaking sink drain is a clog in the pipe. To fix this, you will need to remove the clog using a plunger or a drain snake. Once the clog is removed, the leak should stop. If the leak persists, you may need to call a plumber.
